

Automatic Packaging System

- Smart Solution for the Hygiene Product Industry

With growing labor shortages and rising operational costs, traditional manual packaging can no longer meet the demands of modern production. Our automatic packaging system is engineered to optimize efficiency, deliver consistent quality, and enhance the professional presentation of your products.

Benefits at a Glance

1. Reduce manpower needs

Instead of relying on manual labor at each station, our solution integrates a carton sealer with a conveyor system to seamlessly transfer packages between stations—improving efficiency and reducing manpower needs.

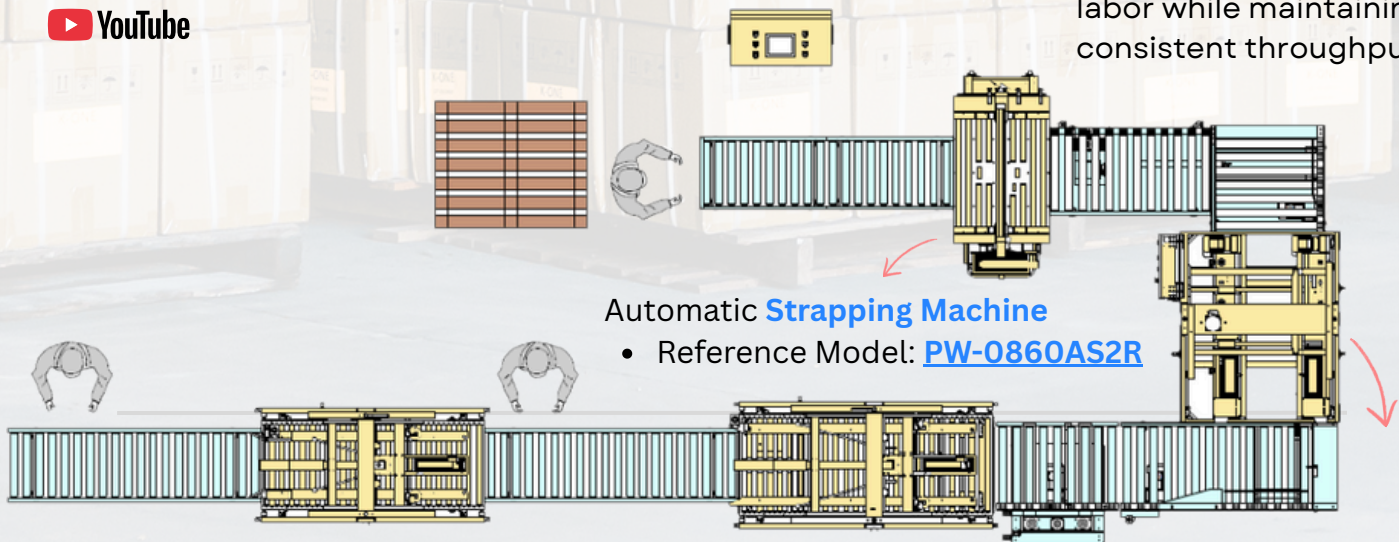

2. Premium appearance

Consistent, neat, and uniform packaging is a key goal that customers seek to achieve through automated packaging solutions.

3. High Productivity

The system achieves packaging speeds of 3–4 cartons per minute, enabling a steady and reliable output. Compared to manual operations that required five operators, the automated line now runs efficiently with only three operators, reducing labor while maintaining consistent throughput.
